

Leveling/Repairing Interior Floors using B-1 Trowel Grade Leveler and Underlayment

Project how-to guide

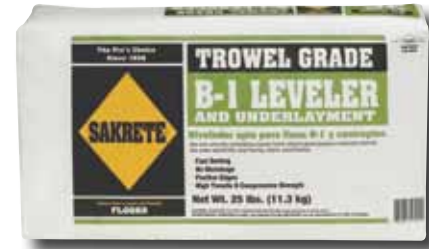

PREPARATION

MIX PRODUCT ACCORDING TO DIRECTIONS ON THE BAG.

Be sure the floor has been cleaned and washed to remove any dust or debris that could interfere with bonding.

NOTE: When mixed correctly, B-1 has a very thick consistency. DO NOT over-water to make the product easier to trowel. This will lower the bond and the strength.

APPLICATION

B-1 can be used over wood or concrete surfaces, up to 2 inches in thickness.

Use a trowel to apply B-1. Continue to work into place until the full thickness is obtained.

NOTE: B-1 is a rapid setting material and will become too stiff to trowel in about 15 minutes, depending on temperature and humidity.

NOTE: For complete product information, please refer to product data sheet.
