Tired of chipping away the concrete from your tools?

Looking for a safe method for cleaning tools, siding or even vehicles?

Sakrete Concrete Mortar Dissolver is a user friendly solution that dissolves concrete and mortar from tools and other surfaces.

APPLICATION

Completely saturate the area of hardened concrete or mortar to be removed with undiluted Concrete Mortar Dissolver.

The surface will turn white on contact as the Dissolver begins to safely breakdown the material.

Re-apply Concrete Mortar Dissolver to reactivate as needed until concrete or mortar has softened to a mush.

This non hazardous formula is 100 percent biodegradable, contains no harmful acids, and will not harm wood, plastic, metal or paint. You can clean up cured concrete and masonry residue on siding, vinyl, wooden decks, even splatter on cars and trucks without damaging paint surfaces.

Easy to use, just spray and watch the concrete dissolve and then rinse or wipe away.

NO GLOVES NECESSARY!

DO NOT RINSE until you are ready to wipe clean. The dissolving properties of Sakrete Concrete Mortar Dissolver stops once water is introduced.

Note: Avoid dissolver contact with any surface that is made of concrete such as block, brick and pavers as well as any mortar joint areas. This is a dissolver not a cleaner.
