PREPARATION

Be sure the floor has been prepped, cleaned and washed to remove loose material, dust or any foreign materials that could interfere with bonding.

Slick or sealed concrete surfaces should be roughened.

Dampen concrete surfaces, bringing to a SSD (Surface Saturated Dry) condition before application of the material.

APPLICATION

MIX PRODUCT ACCORDING TO DIRECTIONS ON THE BAG. Mix only the amount of material that can be placed in 20 minutes.

Trowel Grade Leveler & Underlayment can be used up to 2 inches in thickness and down to a feather edge.

Place and consolidate the mix, working into voids and leveling with a trowel. Continue to work into place until the full thickness is obtained. Do not overwork as this may lead to dusting or cracking.

Trowel Grade Leveler & Underlayment can also be used on exterior grade plywood* and properly prepared embossed vinyl flooring*.

Trowel Grade Leveler & Underlayment is a rapid setting material and will become to stiff for troweling in about 15 minutes, depending on temperature and humidity.

* See technical data sheet for additional installation instructions.

NOTE: When mixed correctly, Trowel Grade Leveler & Underlayment has a very thick trowelable consistency. DO NOT over-water to make the product easier to trowel. This will reduce adhesion and cause cracking, scaling and shrinkage.

NOTE: For complete product information, please refer to product data sheet.
